The key advantages of SQT

- All natural ingredients
- No chemicals, fragrances or acids
- No use of needles or devices
- No numbing cream required
- No breakage of skin or bleeding
- No risk of cross contamination or infection
- Safe for all Fitzpatrick skin types and all ethnicities
- Safe for pregnant and breastfeeding women
- Safe on active acne - specifically formulated for acne prone skin
- Increase hydration and blood supply and decrease inflammation
- Natural melanocyte inhibitor
- 3 - 5 million micro-channels in just 5 minutes
- Minimal down time: 4 - 7 days
- Short application process
- Lower risk profile than other treatments
- Lower PH and improve hydrolipid barrier function
- Increase epidermis thickness by up to 8%

SQT bio-microneedling is the next generation of micro-needling: needling at your fingertips.

Bio-microneedling is a minimally invasive procedure that stimulates the body's natural healing processes to encourage collagen production, improve skin texture, and address a variety of skin concerns. It uses tiny silicious biological “needles” to create micro-injuries in the skin, initiating a repair process that makes the skin firmer, vibrant, youthful and healthier.

It’s role in modern skincare underscores a commitment to delivering genuine transformations, making it an exclusive treatment for skincare professionals and an ultimate choice for clients who want mind-blowing results.

Treatable Conditions:

- TEXTURE AND TONE
- PIGMENTATION
- WRINKLES
- FINES LINES
- SUN SPOTS
- ROSACEA
- ACTIVE ACNE
- OPEN PORES
- BLACK HEADS
- ACNE SCARRING
- STRETCH MARKS
- SCARS
- SIGNS OF AGEING
- COLLAGEN LOSS

SQT's revolutionary bio-microneedling powered by nature's finest micro-sculptors: spongilla spicules.

These microscopic needles, extracted from freshwater sponges, unlock unparalleled results that traditional microneedling can only dream of.

Naturally Rich in Minerals and Nutrients

They nourish skin cells from within, stimulating collagen and elastin production for increased skin vitality.

Unmatched Formula Purity

SQT's 99.2% pure endoskeleton acupuncture powder penetrates pores more effectively than any device, ensuring a gentle and powerful treatment experience.

Biocompatible and 100% Natural

These barbed-like structures (or needle-like crystals) will induce basal cell stimulation for up to 72 hours post treatment, increasing cell turnover, resulting in glowing, rejuvenated skin.

SQT spongilla spicule needles travel deep into the dermal layer of your skin, stimulating the production of collagen and elastin synthesis.

3-5 million microchannels created within 5 minutes

5 - 7 day cell turnover process

72 hours of stimulation post-treatment

3,000% increase in product absorption post-treatment

PHASE 01

Spicule Implantation

During application of the SQT product, three to five million siliceous microneedles are pushed into the epidermis and stimulate the skin for up to 72 hours before they naturally fall out.

PHASE 02

Basal Cell Activation

Basal cells are found at the bottom of the epidermis – the outermost layer of the skin. Basal cells produce new skin cells. As new skin cells are produced, they push older cells toward the skin's surface, where the old cells die and are sloughed off.

PHASE 03

Collagen Reproduction

The implantation of spicules creates a wound healing cascade in the skin, the wound is rebuilt with new granulation cells. The wound is replaced with new dermal tissues and blood vessels, effectively remodelling the skin.

PHASE 04

Epidermal Repair

Epidermal healing, or reepithelialization, is the renewal of the epidermis that has been damaged by a wound (SQT spicule implantation in this case). You'll start to see the formation of new tissue as the skin begins to regenerate.

PHASE 06

Metabolic Renewal

Once the epidermis has renewed, the skin's natural metabolic processes of repair and renew will take place. The new skin will continue to renew and strengthen; collagen is remodelled and the skin becomes firmer and more resilient.

Hello, new skin!

The metabolic renewal process can last for several months, with continued improvement in skin texture and tone.

From the article titled

The SQT Facial is the Future of Microneedling

"Instead of taking 28 days for you to see your results (the standard time for most microneedling treatments), you'll see your skin change happen over seven days because that basal skin cell has been activated."

ELLE

Dermal Roller
30,000
micro-channels in 1 session

Traditional Microneedling
90,000 - 200,000
micro-channels in 1 session

SQT Bio-Microneedling
3,000,000 - 5,000,000
micro-channels in 1 session

Deliver results that far surpass those of the traditional microneedling device.

SQT Bio-microneedling	Traditional Microneedling
1 session	3 - 5 sessions
3000% product absorption	500% product absorption
7-day cell turnover	28-day cell turnover
3 - 5 million micro-channels	<200,000 micro-channels
No risk of infection	Risk of infection
15-minute application	30-minute application
No skin penetration or numbing cream	Skin penetration, requires numbing cream
Can be used on active acne	Cannot be used on active acne
