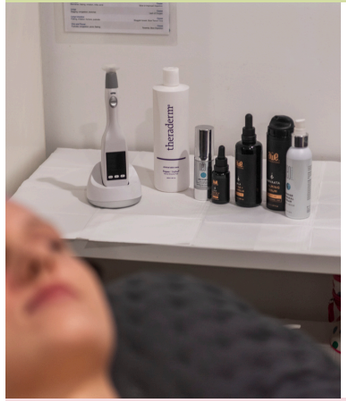
AWAKEN *Your* SKIN'S BEAUTY WITH THE *Jet* PLASMA EXPERIENCE



tre tesori
NATURAL THERAPY & SKINCARE

We all want to feel confident in our skin. Nothing over stretched or over-filled; just natural radiance. Now with Jet Plasma we can offer a non-invasive treatment designed to **rejuvenate, restore, and reveal your natural beauty**. Whether you are looking to tighten and brighten your skin, diminish hyperpigmentation, heal and clear acne, or stimulate hair growth, Jet Plasma is a **quick and painless treatment** that will address all your concerns with **no downtime**.

Jet Plasma works by remodeling and repairing skin from the inside out.

Despite **immediate results** from just 1 treatment, clients should note that the **skin will continue to improve over the next 6-8 weeks** as collagen regenerates.

THE JET PLASMA EXPERIENCE

Jet Plasma is the most advanced technological breakthrough in the Plasma industry! The Profosma Jet Plasma device is FDA and CE cleared for your safety. This non-invasive treatment stimulates the reproduction of high levels of collagen and elastin and remodels the cellular structure from the inside out. Treating facial wrinkles, fine lines, hyperpigmentation and scars. It also helps to shrink pores, treat active acne, and improve texture and tone of the skin on all parts of the body including face, neck, decollete, stomach, back, arms, and legs. The Profosma Jet Plasma is the best-in-class device designed for an incomparable and comfortable client experience

HAIR RESTORATION

We love that Jet Plasma can also support scalp and hair health. Hair thinning is more common than many realise, and if you're noticing reduced volume or overall thinning, you're not alone. Jet Plasma scalp treatments help stimulate the scalp, support healthy hair growth, and restore confidence in your hair.

COMBO TREATMENTS

Jet Plasma can be seamlessly combined with other advanced therapies within our clinic to create a truly synergistic skin experience. Pairing Jet Plasma with SQT Bio Microneedling, Oxygen Therapy, PRIN Lymphatic Enzyme Therapy, and our Medical-Grade Medilux LED enhances skin correction, cellular renewal, circulation, and recovery. These carefully curated combinations allow us to customise powerful treatment journeys that support skin health, vitality, and visible transformation at every level.

FREQUENTLY ASKED QUESTIONS

How many cycles do I need?

Each individual person is different, with their own genetics, age, hormones, how often are they in the sun, have skin trauma, their lifestyle; smoking, drinking, etc. Unfortunately, we cannot predict how quickly each client will respond to this treatment or determine exactly how many cycles will be needed. However, we recommend that you do 1 - 3 cycles of Profosma Jet Plasma.

Must I use the products recommended or can I use any other product?

After a Profosma Jet Plasma treatment, the skin's channels are temporarily open, allowing active ingredients to absorb far more deeply than usual. For this reason, we strongly recommend using the professional products selected for you, as they're specifically formulated to work safely and effectively during this window — delivering results that simply can't be achieved with standard skincare alone.

Will Jet Plasma influence superficial fat deposits?

Yes, but only minimally. During treatment, controlled heat and energy are introduced into the skin, stimulating the cell's mitochondria (the cell's powerhouse) and increasing cellular metabolism. This process may lead to a slight reduction in some fat cells within the superficial subcutaneous tissue. Clients with more significant adipose (fatty) tissue are better suited to dedicated fat-reduction procedures, as Jet Plasma is primarily designed for skin rejuvenation rather than fat loss.

Can Jet Plasma be done on clients using Botox & Fillers?

Yes, clients need to wait 2 weeks from the date of injection to do Jet Plasma and vice versa.

Does Jet Plasma hurt?

This is a completely pain-free treatment. The treatment may feel slightly warm in some places. You may smell the ozone and hear a "sparkling sound."

What is the Aftercare following a Jet Plasma treatment?

After your Jet Plasma treatment, the skin's channels remain temporarily open, allowing active ingredients to absorb deeply. For this reason, only the products applied by your therapist should be used for the first 12 hours. Please avoid makeup, exercise, sauna, steam, and additional skincare during this time.
To support optimal healing and results, curated home-care packs are available for purchase in-salon.

Is there any downtime with Jet Plasma?

Clients will leave the salon looking fresh and glowing. They should however avoid strenuous exercise. Further avoid applying makeup for about 12 hours, as with any other facial treatments

How do I achieve optimal results?

The best results come from supporting your skin both during and after your treatments. Following your personalised home-care routine helps nurture and protect the skin through this important healing phase. Professional skincare keeps the skin nourished, supported, and protected, enhancing the longevity of your rejuvenation results. At the same time, thoughtfully chosen internal supplements work from within to nourish the skin, creating balance, vitality, and long-lasting, healthy results.
